

Amal Chakhar, PhD

Leeds, UK | A.Chakhar@leeds.ac.uk | amalchakhar.com | Google Scholar

Profile

Earth-observation scientist with a PhD and 8+ peer-reviewed publications applying machine learning to satellite imagery for agriculture. Builds end-to-end pipelines on Sentinel-1/-2 and Landsat data — from ingestion and feature engineering to classification and validation — to answer real questions about crops, water and drought.

Skills

Programming: Python (pandas, NumPy, scikit-learn), R, SQL.

Earth Observation: Sentinel-1 (SAR), Sentinel-2, Landsat-8, UAV photogrammetry, time-series analysis, datacubes.

Machine Learning: Supervised classification (Random Forest, SVM, kNN), accuracy assessment, feature engineering on multi-source EO data.

Geospatial: Google Earth Engine, QGIS, ArcGIS, GDAL.

Domain: Crop classification, soil moisture retrieval, irrigation detection, evapotranspiration, drought monitoring.

Languages: Spanish, English, French (professional working proficiency); Arabic (native).

Experience

Postdoctoral Research Fellow, University of Leeds – Leeds, UK Aug 2023 – Present

- Build Earth observation pipelines for the iSPARK programme — crop classification and drought / irrigation monitoring across western Kenya to support food-security policy decisions.

Doctoral Researcher, University of Castilla-La Mancha – Albacete, Spain 2018 – 2023

- Authored 8 peer-reviewed papers on Sentinel-1/-2 fusion for crop classification, soil moisture retrieval, and irrigation detection (full list at amalchakhar.com).
- Designed a local nested grid combining Landsat-8 and Sentinel-2 — published in *Remote Sensing* (2021).
- Developed open software tooling for spatio-temporal datacubes, applied to crop classification in Cap Bon, Tunisia.

Education

PhD, Agricultural and Environmental Sciences, University of Castilla-La Mancha, Spain 2023

MSc, Integrated Planning for Rural Development and Environmental Management, Spain **Engineering Degree**,
Horticultural Systems, University of Sousse, Tunisia 2015
